---

Shannon, I could not answer the phone because I was driving when you called.

The reason I sent you the photo was because that is what I always did when I used to make these types of complaints to AZDEQ.

Emily Bonanni was the person at AZDEQ I sent them to.

When I was told to resume making the complaints to Maricopa AQ I just assumed I could send you photos if I had something to report that was visible at a particular time.

The photo I sent you was just to illustrate the smog coming from the direction of Hickmans, which occurs with some regularity. And even if the smog I photographed was not from Hickman's the smell was from his place and it was bad.

I could not show the actual smoke from the machine because I was too far away, but I did take photos in the past showing the smoke from the machine billowing into the air.

Those photos were sent to Emily at AZDEQ several months ago. I do not know if she still has them.

I deleted them when I sent them to her.

But from now on I will retain such photos and if I cannot send them to you I will forward them to Steve Brittle and see if he can use them.

On the matter of your agency not being able to use them, that surprises me since AZDEQ accepted them.

And a photo is not "here say", it is a visual documentation of a moment in time.

I shoot in the raw format of my camera, which puts an encrypted timestamp on the image that cannot be altered.

These types of images are allowed in courts of law, which is why I cannot understand why your agency cannot use them, especially if the problem has the potential of disappearing before someone from your agency can arrive to photograph it themselves.

I know this is probably a moot point but I wanted to let you know how I felt about this.

I will continue submitting complaints every time the pollution from Hickman's invades my home.
